Mission Details

Dear Special Agent Norris,

Our double agent within the **AREA7331** research facility managed to exfiltrate some information and gave us remote access to one of the terminals connected to the mainframe of their underground testing facility.

We got wind that the organization is inches away from completing a research project that will seriously impact the safety of the world as we know it.
Your mission is to hack your way into their mainframe and cause an ***unscheduled rapid disassembly*** of the nuclear reactor within their facility.

As for the environmental implications, well, we'll cross that bridge when we get to it.

Use <u>EVERYTHING</u> you know about the systems within the facility and complete your mission at all cost.

The double agent managed to snap a photo of the network admin's badge, you'll find it attached to this document.

Good luck agent,
you're gonna need it.
